

Posted September 12, 2026 on the NextRequest thread for request 26-838.

Re: FOIA Request #26-838, request to process in stages

While my fee appeal is pending, I ask the City to process the following without waiting for a deposit, since each is an existing electronic record that requires no redaction:

1. All Flock Safety / Flock Group Inc. contracts, order forms, renewals, and invoices, 2021 to present (the purchase-order report you provided shows the program began around June 2021, so please include the original agreement).
2. City Council agenda items, staff memos, and minutes for the September 11, 2023 approval referenced in PO 051797, and for the Planning Department and Business Development Flock purchases (POs 052049, 054454).
3. The Police Department's ALPR/Flock policy and SOP.
4. The Flock Data Sharing MOU and any other agreement under which outside agencies can access Southfield's cameras, plus a screenshot or export of the sharing configuration in the Flock dashboard (organizations with access to Southfield cameras, and organizations Southfield can search).
5. The camera inventory export (location names, coordinates, install dates) from the Flock dashboard.
6. The URL of any Flock transparency portal for Southfield PD.

For the audit log (item 5 of the original request), I understand the Flock system exports audit records only for the trailing 30 days. Please provide the native CSV exports of the search audit, the network audit, and the event log for whatever window the system makes available on the date of processing, as the Dearborn Heights Police Department did in June 2026 at no charge. If the City maintains that these exports require labor beyond a few minutes, please state the number of minutes attributed to them separately from the items above.

To be clear about scope: I am not asking the City to reconstruct audit history the system no longer holds, and I am not asking for paper, media, or any compilation. Existing files, attached to the portal, in the format the City already has them.

Please deliver everything as native files (PDF, XLSX, CSV) through NextRequest or email. No paper copies or physical media are requested.
